

Challenge 4 part B solution

XMy dear HerzX FeuerX, your work with the cult is of the first order, and our hopes now rest entirely on finding a suitable power source for the device.X Our agents have infiltrated the PowerX WingX of the CentralX WaterX and PowerX CommissionX and have begun a systematic and comprehensive study of the hydro-electric resources in the country.X Their initial estimates suggest the potential to generate over fourX thousandX megawatts at peak load, assuming only sixtyX percent efficiency.X GermanX engineering may well increase this and I see a happy future for the ReichX in the IndianX subcontinent.X Even now a pilot power plant in UttarX PradeshX is generating enough power for our initial trials with the TaschenlampeX project.X The enemy agent known to us as KholiX has been getting close to our operations and it may be time to bring him in.X I will arrange for him to be held at the power plant until we can interrogate him further.X

Your friend, TagX LetzterX.
